

Zearn greatly appreciates the time and effort the EdReports reviewers have put into evaluating our curriculum, and we are proud that our K–5 math curriculum has received a green rating across all three review gateways: Focus & Coherence, Rigor & Mathematical Practices, and Usability. We value the way in which the EdReports process helps to set the standard for high-quality learning for all students.

The EdReports Zearn Kindergarten report recognizes that with Zearn, students learn math as a progression of connected ideas, grounded in visual problem solving and the concrete to pictorial to abstract approach. The greenlit materials embed differentiation, precise feedback, and multimodality learning into the daily math block by blending self-paced software-based activities with teacher-led learning.

We are committed to improving our materials to better serve students and teachers and are grateful for the extensive feedback provided by EdReports. With the feedback of educators like the expert educator Edreports reviewers, Zearn Math has grown to become a comprehensive set of K-5 math instructional materials used by 1 in 4 students nationwide.

As a nonprofit, access to Zearn is free for every individual classroom and family. Create an account for free at about.zearn.org to explore all digital math lessons and instructional resources.
